

Tobit2Exchange

Fast, easy and reliable data transfer from
Tobit® Server into various target formats

Objectives

- Fast, easy and reliable data transfer from Tobit® Server into various target formats
- Migration data is highly customizable
- Supports single user and batch mode migration. Manual steps are reduced to a minimum.
- Applicable for the migration of single Tobit® Server as well as for IT companies, who migrate Tobit® data many times
- No time limit for the program usage
- Extensive logging of the migration activities. Therefore it's possible to review the migration at a later date
- Supports also older Tobit® versions (since version 6.6)

System requirements I

- David® Server:
 - 6.6
 - Home
 - SL
 - XL
 - V8 / V8+
- Target formats:
 - MS Exchange® Server 2003
 - MS Outlook® PST files
 - ODBC enabled databases like MS SQL Server® or Firebird
- Operating system:
 - MS Windows® 2000 professional (SP4 or higher)
 - MS Windows® XP professional

System requirements II

- Clients:
 - Installation on a dedicated workstation.
 - Installed version of Tobit® InfoCenter®
 - Installed ODBC Datasource for the user/configuration database
 - For a migration to MS Outlook® or MS Exchange®:
 - Outlook® has to be the standard mail client
 - CDO has to be installed during the Outlook® setup procedure
 - Usage of the Outlook® Mapi32.dll instead of the one from Tobit®
 - Support for Outlook® 2000 and higher (Outlook® 2003 recommended)
 - For a database migration:
 - Installation of the database tables (SQL Scripts are included)
 - ODBC Datasource configuration
 - Supported databases: MS SQL Server and Firebird. Other Databases on request

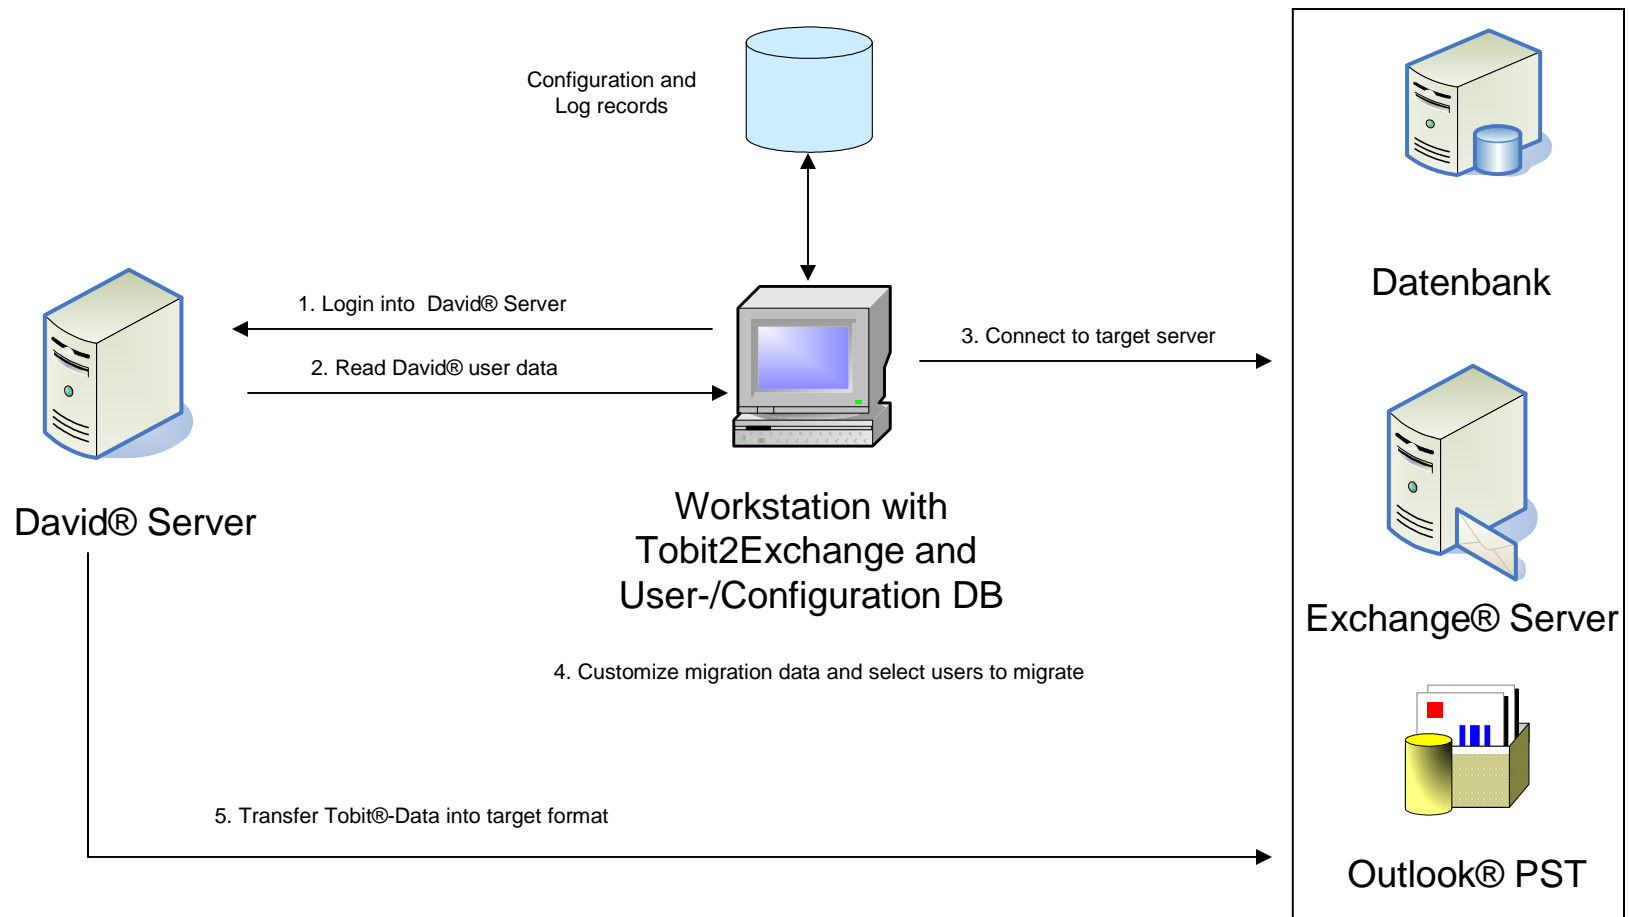

Scope of services

- Migration of:
 - Calendar items
 - Messages
 - Mails
 - Faxes
 - SMS
 - Voice Mails
 - Tasks
 - Contacts
 - Public contacts
 - Global folder
- Transfer of the whole folder structure into the target format
- File attachment are migrated as well

Installation

- Check that the system requirements are fulfilled
 - CDO installed
 - Outlook® is standard mail client
 - Installed version of Tobit® InfoCenter®
 - Correct version of mapi32.dll
- Start the File „Setup.exe“ on the workstation
- Install an ODBC datasource (System DSN):
 - Driver MS Access®
 - Datasource name = Tobit2Exchange
 - Database = Link to the database Tobit2Exchange.mdb. The database is copied during the installation procedure into the target directory.
 - System database = leave this field empty
- Check the user permissions for the David® Server and the target format

Migration workflow

How to use Outlook® Batch Mode

- Open Mail Properties in Control Panel
 - Activate button „Show Profiles“
 - Click Add-button
 - Select manual configuration for information services
 - Specify profile name, e.g. Tobit2Exchange
 - Add PST information service
 - Specify a pst name and finish configuration
- Start Tobit2Exchange
 - Select Outlook® als target format and specify the created profile name
 - Select Option „Create PST“ and specify the directory, in which the created PST's will be saved
- Start Migration
 - The Exchange® User Name will be taken as the name for the created PST file

Why to choose Tobit2Exchange?

- Established in more than 300 migrations
- First class and flexible customer support
- NetProof has know how in all relevant areas
 - David®
 - Exchange®
 - Software development
- Software is localized and available in German and English
- NetProof has access to all available David® versions on different platforms, so customer requests and problems can be handled very fast
